CS7026: Authoring for Digital Media: Assignment 1 Portfolio website documentation

Homepage URL: https://www.scss.tcd.ie/~rongj/www/Portfolio
GitHub URL: https://github.com/rongj-afk/CS7026-portfolio

My portfolio presents my work across digital media, graphic design and user experience. It is intended for potential employers, collaborators and tutors who want to understand both the work I produce and the decisions behind it. The website has seven pages: a homepage and four individual project case studies. The homepage begins with my portrait, name and a short introduction, followed by a software section and a selection of projects. Each project entry includes a thumbnail, date, title and a 'Read it' link to its case study. The four case studies cover the Singapore Changi Airport summer campaign, Air New Zealand boarding pass privileges, IP design, and visual and social media design at NYU Shanghai. Each page develops its own project narrative through descriptive text and supporting visuals. Previous and next project links connect the case studies in a continuous browsing sequence. A repeated footer contains contact details and links to Email, Instagram, Facebook and LinkedIn.

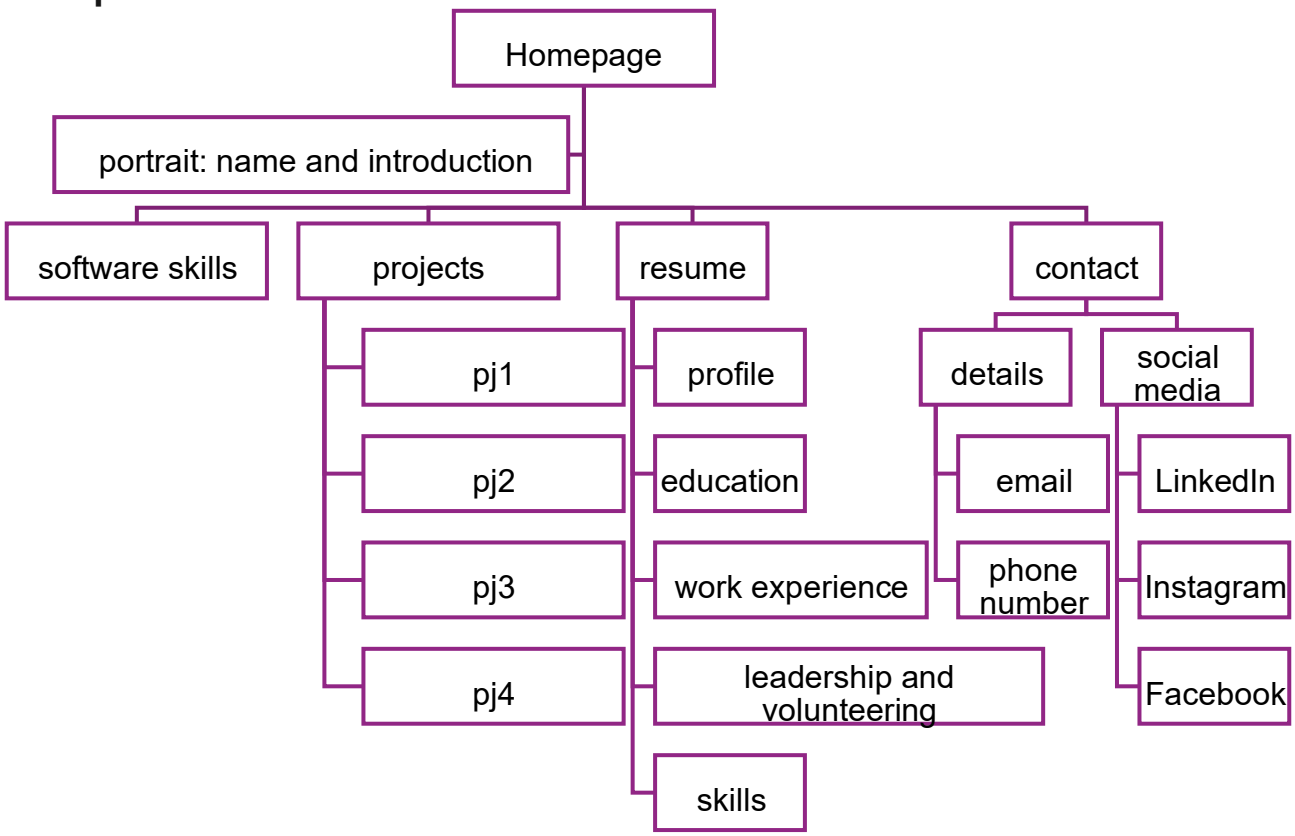

Site outline

My portfolio presents my work across digital media, graphic design and user experience. It is intended for potential employers, collaborators and tutors who want to understand both the work I produce and the decisions behind it. The website has seven pages: a homepage and four individual project case studies, resume and contact pages. The homepage begins with the header menu: Home, Projects, Resume and Contact. And there are my portrait, name and a short introduction, followed by a software section and a selection of projects. Each project entry includes a thumbnail, date, title and a 'Read it' link to its case study. The four case studies cover the Singapore Changi Airport summer campaign, Air New Zealand boarding pass privileges, IP design, and visual and social media design at NYU Shanghai. Each page develops its own project narrative through descriptive text and supporting visuals. Previous and next project links connect the case studies in a continuous browsing sequence. A repeated footer contains contact details and links to personal social media: Instagram, Facebook and LinkedIn.

Future development

I plan to add new projects while keeping the homepage selection focused, and to make each case study state my role, process and outcome. I would add captions to key images, write more descriptive text and replace generic link labels. I also going to add subtle motion with JavaScript. The project files and revision history are kept in the GitHub linked above.

Sitemap

Page content

01. Project 1: UIUX design

Designing an interactive experience context, user challenges, experience architecture, interface development and reflection.

02. Project 2: UIUX Design

Travel services and destination perks: user insights, persona, design process, sitemap, low-fidelity interfaces and final designs.

03 Project 3: IP design and 3D modelling

Character and visual design: background, brief, moldboard, sketches, AI-assisted exploration, final outcome and reflection.

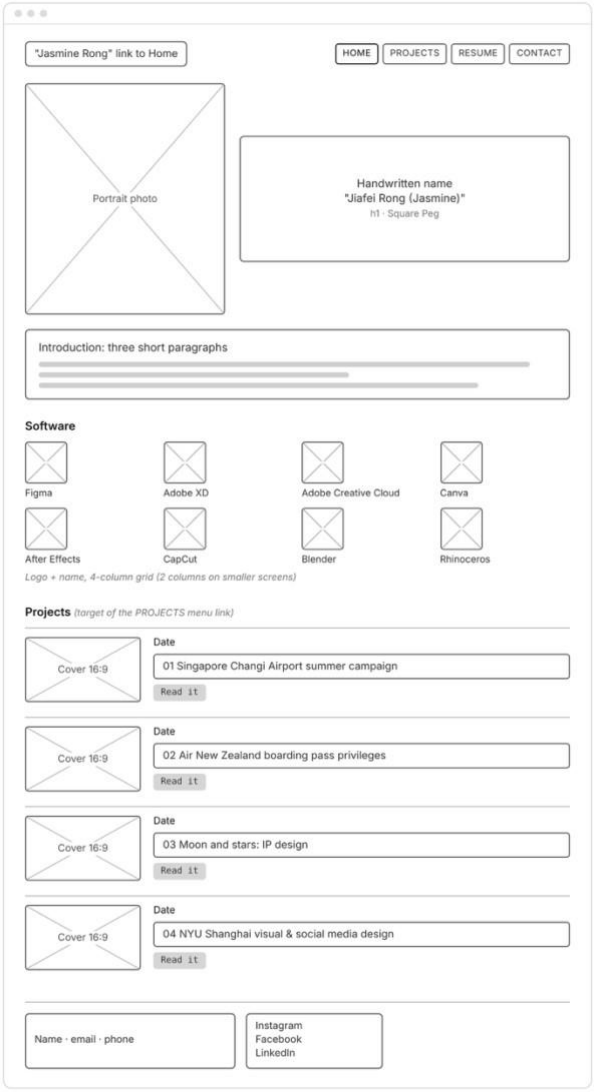

04 Project4:NYU Shanghai - Visual & Social Media Design

Campus communication: event brief, visual concept, moldboard, graphic elements, final poster and event video section.

How the case studies vary

Project 1: context, challenges, experience architecture, low-fidelity screens, visual system, showcase and reflection.

Project 2: overview, insights, persona, design process, sitemap, low-fidelity interfaces, final designs and reflections.

Project 3: character background, brief, visual direction, sketches, AI exploration, final outcome and reflection.

Project 4: introduction, deliverables, event brief, visual concept, mood board, visual elements, final poster and video section.

Design outline

Main colors

Background	Main text	Section accent	Link background
#FFFFFF	#171717	#7A35B0	#CECECE

The homepage introduces me with a portrait beside my name. I use this arrangement to make the introduction personal and give visitors a clear starting point before they explore the projects. A white background and dark text (#171717) keep the page visually simple and allow the project images to stand out. Purple (#7A35B0) marks section headings and dates, creating a repeated visual cue across the website. Light grey backgrounds (#CECECE) distinguish the 'Read it' links from the surrounding text.

The typography has three roles. Square Peg gives my name a handwritten, signature-like appearance. Inria Serif is used for the introductory text, project titles and case-study body text, creating continuity between the overview and detailed pages. Some type Mono gives dates, small links and footer text a different appearance, separating supporting information from the main content.

Generous whitespace separates sections and gives each project room on the page. On the desktop homepage, each project row places a thumbnail on the left and the date, title and link on the right. Repeating this arrangement helps visitors scan the selection and choose a project. The software section pairs recognizable logos with their names to make the tools easy to identify.

The project pages begin with a centered title and summary, followed by purple section headings, explanatory text and visuals of the work and process. This shared approach accommodates different kinds of projects, while each case study retains its own sequence of sections. Previous and next project cards encourage continued browsing. The repeated contact and social footer gives visitors a familiar place to find my contact details.
